13th European Meeting on Science, Technology and Innovation

Málaga
20 - 22 Marzo
2024

20/03/2024 INNOVATION ROOM

Coorganiza:

Fondos Europeos

9:10 - 9:30: Innovation Room Opening Session

A forum whose contents revolve around disruptive technologies, R&D&I in the business environment, collaboration formulas, data sovereignty, and Public Procurement of Innovation (PPI) as central axes of this space. The inaugural conference features the participation of CDTI - as the main spanish public business entity whose objective is to promote innovation and technological development of national companies - and the participation of the Directorate General of Technological Research and Innovation of the Community of Madrid, which among its competencies is assigned to promote research and technological innovation programs in the business fabric and research organizations.

13th European Meeting on Science, Technology and Innovation

Málaga
20 - 22 Marzo
2024

9:35 - 10:20: Sandboxes: putting regulation at the service of innovation (and vice versa)

Controlled test spaces, known internationally as sandboxes, are currently in a state of effervescence. The European Commission has made them - under the broader concept of experimentation space - one of its flagships within the New European Innovation Agenda and published a guidance document in 2023.

There are cases, especially in the field of Deep Tech, where innovation aims to create new markets and challenges the regulatory framework. Either because there is a clear regulatory boundary that inhibits technological development or because regulation is under construction, with its associated uncertainty. In both cases, sandboxes allow regulation to be put at the service of innovation, creating spaces for experimentation in which, in a temporary and controlled manner, companies can test with regulatory flexibility. And vice versa, given that the results of such tests can generate vital regulatory learning for the administration.

In this context, this session brings together administrations and companies to analyse the prospects for sandboxes in Spain and the opportunities that are opening up for the different agents in the system.

13th European Meeting on Science, Technology and Innovation

Málaga
20 - 22 Marzo
2024

17:00 - 17:45: Public Procurement of Innovation (PPI)

After more than a decade of promoting Public-Private Partnerships (PPPs) as a strategic tool for transforming public services and as a lever for new production and business models, numerous initiatives and tenders have been launched at all levels (European, national, regional, local), with substantial resources mobilised. It is therefore an opportune moment to take stock of achievements and reflect on the experience gained; among the many issues to consider, the following stand out: What scale has PPP reached? Has PPP contributed to improving the performance of Public Administrations as expected? Are current PPP instruments adequate and sufficient? How and what extent have they been utilised? Which technical, legal, and financial aspects of PPP processes have proven efficient and effective, and which others should be improved? Is PPP confirming its capacity to generate new products and markets? Is PPP facilitating the take - off and growth of innovative companies? Is PPP truly facilitating knowledge transfer and public - private collaboration? The Panel's objective will precisely be to address and discuss these issues from the various perspectives of the stakeholders involved, providing a comprehensive and first-hand insight into them.

16:30 - 17:15: Smart specialization models in collaboration between European innovation ecosystems

This round table deals with different European initiatives and calls, supported by one of the flagships of the New European Innovation Agenda, and which seek to strengthen collaboration between regional innovation ecosystems at the European level. These initiatives include the Partnerships for Regional Innovation (PRI), the Regional Innovation Valleys (RIV) and the Interregional Innovation Investment Instrument (I3), among others.

All of these initiatives and calls have the common goal of improving and boosting European innovation ecosystems to address societal challenges. To do this, they try to promote cohesion by strengthening collaboration between the different territories of the EU, taking the strategic models of smart specialization as a starting point. That is, strategic areas of regional expertise and specialization, identified in the smart specialization strategies (S3), are leveraged, while aligning with key EU priorities.

In this regard, the R&D&I Policy Network (IDI Network), in its role of multi-level strategic coordination between the Autonomous Communities and the General Administration of the State, has collaborated intensively in the dissemination of these initiatives and calls during the last years.

12:30 - 13:15: From pilots to products: early-market feedback as a competitive advantage to improve technology development. DIMOFAC as use case

In this panel, we will explore how the DIMOFAC project has become an example of technology transfer, through the use of pilot companies to test technologies and understand market needs before the launch of such products. We will discuss how market validation and Early Adopter programmes benefit the product development process to achieve results more focused on their ideal customer. Discover how early market feedback influences the evolution of successful products and how this feedback is integrated into the development and commercialization process. Additionally, during this panel, we will learn how DIMOFAC has led technological transfer and innovation by using such pilots and obtaining real feedback during the early stages of technology development. Finally, we will discuss how to promote the sustainability of these technologies over time and the plan to continue promoting them through the Techfinders.io website, a platform to promote the latest technologies in the industrial sector.

13:20 - 14:05: The Future of the Energy Transition: Enabling Technologies and New Business Models

The panel discussion 'The Future of the Energy Transition: Enabling Technologies and New Business Models' will focus on the crucial role of enabling technologies and artificial intelligence in achieving energy targets, decarbonisation and the integration of renewable energies in Spain and in the context of the European Union. During the roundtable, we will explore how these innovative technologies can contribute to addressing key challenges in the energy sector, as well as the opportunities they offer for innovation, operational efficiency and the creation of new business models. Through questions addressed to experts in the field, such as Azahara Migel from Indesia, Miguel Rodrigo from IDAE, Baldomero García from Red Eléctrica and Alicia Carrasco from OlivoEnergy, we will seek to better understand the impact and potential of these technologies in the transformation of the energy sector and their role in the transition towards a more sustainable and resilient energy system.

11:35 - 12:20: Water and drought: Facing the future based on a sustainable model

As a result of climate, average precipitation in southern Europe is decreasing while average temperatures are increasing. Spain is facing a drought situation. This ongoing and widespread deficit should be addressed as a national issue. Therefore, it is important to have special plans for this situation and minimize its effects as much as possible. The best way to prevent drought must largely come from water use planning, the implementation of new methods for storage and transfer, desalination, purification, and reuse, the application of new technologies and artificial intelligence for more efficient consumption, the modernization of irrigation systems, etc. In this way, Spain can face the future based on a sustainable model.

13th European Meeting on Science, Technology and Innovation

Málaga
20 - 22 Marzo
2024

12:40 - 13:25: The city as a space for experimentation

We will analyze the opportunities of experimentation spaces as an instrument to address urban challenges from the perspective of innovation. We will learn about cases of public administrations that are working on the approach of the city as an innovative laboratory. Finally, we will reflect on the importance of committing to new mechanisms of knowledge transfer, public-private collaboration and dynamisation of the innovation ecosystem as key transversal vectors of public innovation policies.

17:05 - 17:50: Technology Platforms: a A Key Element in the R&D&I System

This session presents the network of Technology and Innovation Platforms funded by the State Research Agency where several of these intermediate bodies present the actions they have carried out, their role in the R&I system and how they face current challenges. Technology and innovation platforms are public-private structures led by industry, in which all the agents of the Spanish system interested in a technological field work together and in coordination to identify and prioritize technological, research and innovation needs in the medium or long term.

9:40 - 9:55: Update: PERTE for Vanguard Health

Health is one of the major areas within the Strategic Projects for Economic Recovery and Transformation (PERTE). Cutting-edge healthcare refers to the development of innovative procedures to enhance the prevention, diagnosis, treatment, or rehabilitation of patients in a personalized manner. The aim is to transform the healthcare sector with actions where science, innovation, and digitization go hand in hand to address new health challenges. This panel represents a review and update on the specific objectives of this PERTE.

10:00 - 11:00: Active and healthy ageing: how to progress in this common challenge with innovative approaches

Ageing is a common challenge in the European Union, which will increase the need for home care and healthcare services, thereby putting pressure on our welfare system. Understanding that ageing is a process that begins long before old age and, as postulated by the WHO, entails a progressive loss of intrinsic capacity influenced by lifestyles, environmental factors, and chronic diseases. Preventing this disability is a goal of great interest within a more collaborative, integrated, and patient-citizen-centered vision that seems to offer a more sustainable and efficient response to current models. Innovative approaches to chronic pathology and prevention of functional decline will allow people to live longer and, above all, with better quality of life. Promoting participation and collaboration among all stakeholders in the care chain is essential

11:15 - 11:25: Transforming Drug Development using advanced pharmacological technologies: the hollow fiber system at the University of Zaragoza

Drug discovery and development is a high-risk endeavor. Pharmaceutical R&D faces enormous investments and prolonged timelines that often leads to delays in providing new medicines to the patients and low rates of economical returns. Industry and regulatory authorities require technologies and approaches that reduce time from laboratory to the clinic, able to anticipate effects in patients from preclinical data and improve the decision-making.

This talk will outline a transformative novel technology using advance pharmacology which has been implemented at the University of Zaragoza at large scale: the Hollow Fibre System (HFS). HFS can play a transformative role in drug development, offering a cost-effective, time-efficient alternative to traditional methods and minimizing animal testing. It is endorsed by the regulatory bodies European Medicines Agency (EMA) and the US Food and Drug Administration (FDA) due to its predictive accuracy for dosage and efficacy to inform clinical stages of development, thus, reducing drug development failure risks, accelerating regulatory approvals and addressing the urgent need for new medicines.

13th European Meeting on Science, Technology and Innovation

Málaga
20 - 22 Marzo
2024

11:45 - 12:45: Innovation and transfer in pharmaceuticals and biotechnology

Biomedical innovation is predicated upon technology transfer and collaboration among diverse stakeholders within the ecosystem, who must work in concert to translate frontier research into tangible solutions that reach patients in the form of treatments, vaccines, or diagnostic solutions. Biotechnology companies have precisely specialised in bridging one of the most critical links in the transfer chain: converting scientific discoveries into technology. In fact, the majority of them emerge from research conducted by public research centres, universities, hospitals or CSIC or ISCII. In this session, key stakeholders within the biomedical innovation ecosystem will collectively contemplate the opportunities and challenges Spain faces in driving technology transfer within the Spanish biotechnological and biopharmaceutical sectors. One of the objectives outlined in the Cutting-Edge PERTE (Strategic Project for Economic Recovery and Transformation) includes ensuring collaboration and coordination between the scientific community and the business sector.

Málaga
20 - 22 Marzo
2024

12:50 - 13:35: Does science really offer any solutions to water scarcity?

Desalination plants, recycled water, leak control, water transfers... versus restrictions, consumption control, habit changes. What is more credible to happen? Can society be changed by decree? Do we have time for a cultural shift? How much does all this cost? Who pays for it? Is it conceivable to limit the growth of a sector or is it utopian? will the urbanizations + golf courses return? Is it possible to deny a license for a ski slope on a beach in summer? We will ask all of this to institutions and companies knowledgeable about this and have a part of the responsibility and solution

9:40 - 10:25: Talent and skills for the new healthcare industry. Spain in the European context.

According to data from the WorkInHealth Foundation, the healthcare industry is growing significantly and more than half of the companies in this sector plan to hire new employees by 2023. But, due to technological advances and socioeconomic changes, more than 8 million jobs will be affected in the sector by the change in required skills, so it is urgent to make it attractive to young talent, especially those with data skills. In surveys of engineering and computer science school graduates, not a single company in the healthcare sector was mentioned as a potential employer. This talent and skills gap is worrying, as the healthcare industry is already crucial in the lives of 450 million EU citizens. In Spain, the healthcare industry is the fourth sector with the highest talent mismatch, estimated at 82%. This roundtable will address - the challenges and specific skills needs (current and future) of the healthcare industry in Spain, - the role of the different actors at institutional, academic and industrial level in addressing these needs collectively - the opportunities for Spain to reinforce its leadership in the field of healthcare in Europe, also from the industrial perspective. In addition, the European initiative The Skills Partnership for the European Health Industry, promoted by DG GROW and coordinated by EIT Health, will be presented.

2024

12:40 - 13:25: Scientific and Innovative Talent

Institutional session. Open access.

The objective of the panel is to analyze how talent/people are fostered and attracted, and how talent aspects are worked on in the field of research. Furthermore, it aims to address the skills and abilities that researchers will need in the short, medium, and long term to adapt to an ever-changing and increasingly globalized and cross-cutting job market. With this starting point, the theme will be addressed from both a national and European perspective, and from both the viewpoint of public research and the private sector.

11:25 - 11:40: Innovation Ecosystems: an opportunity for startups

Innovation ecosystems are created as places where startups can develop all their capabilities, being guided and energized by specialized mentor who help them grow in the right direction, acquiring the necessary skills. They also provide them with resources and access to markets that allow them to test their solutions in a controlled manner before launching directly into the market. Currently, startups and entrepreneurs have access to many innovation ecosystems, which represent an opportunity they shouldn't miss

Juan Marcelo Gaitan Leiva

Telefónica

Director of FIWARE IHubs

Málaga Spain

Organized by:

11:50 - 12:35: Towards CPI 2.0: From Individual Initiatives to Systemic Deployment of Innovations in the Public Sector

The European Commission and the OECD have been working on public innovation for more than 15 years, and in the last 5 years, they have intensified their activities in Public Procurement of Innovation (PPI) through the Horizon Europe program. In Spain, in terms of support programs, the MICIU (Ministry of Science, Innovation, and Universities) has been working on PPI since 2010 with ERDF funding, leading to support programs for the promotion of PPI such as Innocompra and the FID line (Promotion of Innovation from Demand). The CDTI (Centre for the Development of Industrial Technology) has also been promoting support instruments for PPI like the Innodemanda program or the current Pre-commercial Public Procurement program. This adds to the particular initiative of public buyers in promoting PPI with regional funding.

In this sense, we are entering a phase of consolidation and maturity of the instruments and programs that were aimed at promoting PPI. Now, the next step is to continue working on the following steps, on the deployment of such innovative solutions and their scaling up at a global level. Both public buyers and companies need to move forward in PPI 2.0 and for those prototypes developed through PPI to be implemented effectively and systemically, with a real impact on the citizenry.

After more than 250 million euros invested in PPI, what now? What results have we obtained? Have we overcome the valley of death with the Pre-commercials? Are the prototypes ready to make the commercial leap? Are the results being deployed? What barriers do administrations face? What are the keys/tools for administrations to deploy the results of PPI? Are there legal instruments that help in deployment? How can companies help in these phases? The panel will try to answer these questions from different viewpoints (Administration, company, and financier), providing methods to structurally increase the success rate of innovation procurement in the public sector.

Transfiere

13th European Meeting on Science, Technology and Innovation

Málaga
20 - 22 Marzo
2024

13:45 - 14:30: Closing ceremony and awards

The Closing Ceremony of the thirteenth edition of Transfiere will be the ideal setting to meet the winning start-up from among the five European candidates selected with Deep Tech projects. This event, which marks the end of the Ágora programme and the celebration of the Forum, will also see the inaugural presentation of the Transfiere 2024 Innovative Company Award.

Organized by:

20/03/2024 RESEARCH CENTER

10:00 - 10:20: Research Center Opening Session

A forum focusing on the progress of research groups, spinoffs, startups, university institutes... through the exhibition of innovative solutions, opportunities, and prototypes. The inaugural conference features the participation of the presidency of the Spanish National Research Council (CSIC), an entity whose mission focuses on promoting, coordinating, developing, and disseminating multidisciplinary scientific and technological research to contribute to the advancement of knowledge and economic, social, and cultural development, as well as personnel training and advising public and private entities in these matters.

Organized by:

10:10 - 10:20: Research and transfer in the European context: success stories and new opportunities

Robotics & Perception: From Research for Mars to Innovation

As a software engineering company, we are involved in ongoing research projects to explore the potential of emerging technologies. For example, we are currently engaged in research on robotics and perception for the purpose of exploring caves on Mars, where we will test how robots behave under adverse conditions and with no human intervention. Additionally, we are also conducting research on cooperative perception in urban scenarios, which aims to increase pedestrian and cyclist safety. This pitch gives an overview how our research efforts foster innovation and inspire new possibilities.
